Figure 2 – Savills Tech Cities 2017 'buzz and wellness index' component of overall rankings, with its constituent parts*:

Source: Savills World Research, *Tech Cities 2017*

*Each of the three components is weighted then averaged together to get the final index score

Savills *Tech Cities 2017* programme aims to understand the diverse factors that make places a good location choice for the tech sector; examining 22 global centres which have thriving and growing tech industries, home

grown start-ups and incubators, and are at the top of global shopping lists for tech companies looking for space in which to locate.

The 'wellness' component of the 'buzz and wellness index' examines factors such as the health of the urban environment, including pollution levels, quality of parks, crime rates, healthcare, pay equality and commuting times, while 'city buzz' considers nightlife, entertainment and cultural offer. These rankings have then been combined with the cost of living (excluding property costs) to provide an overall 'city buzz and wellness' index.
